

Marketplace Updates

CHANGELOG SINCE M3 & CATEGORIZED SHIPPED WORK

Project Catalyst Fund 11

Milestone 4 - Marketplace Updates & API Launch

Reporting period: 2026-06-23 to 2026-08-31

Issued: August 31, 2026

Prepared by Awen LLC · <https://sync.land> · Project #1100272

Executive summary

Between the Milestone 3 marketplace launch on 2026-06-23 and this submission on 2026-08-31, Sync.Land shipped **77 commits** to the platform and **4** to the public OBS player repository.

This document sets out what was built, what was broken and then fixed, and where to verify each claim. Every commit hash below is real and resolvable in the repositories named in §4.

Platform commits in the window	77
OBS player commits in the window	4
Functional areas touched	7
Defects found and fixed	15 documented below
Reporting period	2026-06-23 to 2026-08-31

The honest summary of the period is that roughly half the work was new capability and half was correcting things that were already wrong, several of which had been wrong since before Milestone 3 and were only found because real artists started using the platform unassisted. Section 3 documents those in full, including the two that were invisible from an administrator account.

1 · Acceptance criteria mapping

CRITERION	WHERE IT IS MET
Marketplace updates clearly displayed in documentation	§2, organised by functional area
Bug fixes clearly displayed in documentation	§3, with cause and consequence for each
Claims independently verifiable	§4, every commit hash, in named repositories

2 · What shipped

2.1 Licensing model

The free tier moved from Creative Commons to a purpose-written licence. CC-BY was never a sync licence: it permits commercial use with attribution and cannot express the caps, the term, or the reserved uses a music licence needs.

- **Sync.Land Free Sync License, SLFS-v1.0-2026-07-11.** Attribution required, capped at 100,000 views and 12 months, with a defined conversion path to a paid tier rather than a silent expiry. Shipped `41f954e`, with a rendered PDF certificate `ca3dfcb` and a clean print render `9f9346a`.
- **Versioned Terms acceptance** with an audit record per acceptance, and capture at registration rather than only by backfill. `7c2c562`, `8c6b78c`.
- **Song rights metadata:** master and publishing splits, one-stop status, sample clearance status, and ISRC captured at upload. `7c2c562`, `0ec5888`.
- **Clearance documents** attached to a song as native attachments with an owner-only upload interface, so an artist can evidence a sample licence themselves. `b659fb7`.
- **Version-controlled snapshots** of the Terms and Privacy pages, so the exact text a user accepted can be reproduced later. `c1fd188`.

2.2 The external application API

The `/streamer/*` namespace and the reference application that consumes it.

- **The streamer REST namespace,** Personal Access Token authentication, and clearance responses carrying the attribution string a client must display. `4cac343`, `5698e18`.
- **OpenAPI specification raised to v1.2.0** covering the new surface. `ceb86f7`.
- **The OBS player,** released as v0.2.0 under Apache 2.0: persistent transport across scene changes, audio routing so music lands on its own mixer channel, an attribution overlay, themes and a settings screen. Player repository `d8a9b1f`, `5871308`, `5337f18`, `b522ae9`.

2.3 Briefs and pitches

Built in direct response to survey feedback. See the User Feedback Report §3.

- **The open briefs board** at `/briefs/`, with a review step before a brief goes live. `8a97d5a`, `dbe4259`.
- **Pitch records and an admin review queue**, with statuses and a drafted forward to the supervisor. `8a97d5a`.
- **An artist-facing view of their own pitches**, sortable and filterable, with honest status collapse so a closed brief reads as closed. `d3721d5`, `dd8bd00`.
- **A public brief intake form** so a buyer can post a brief without an account. `75389b0`.

2.4 Artist tools

- **Self-service deletion of an empty artist profile** `54f3b12`, and album editing after upload `42bd528`.
- **Artist location and territory**, with a country filter on the directory and country in the artists API payload. `af37b54`, `572a728`.
- **Owner-controlled pause and removal** of a song, so an artist can withdraw work without contacting us. `7c2c562`.
- **An AI-use declaration at upload**, carried through the clearance API. `5054912`.
- **A seeded random sort** on the catalogue so the same artists do not always surface first. `ea19037`.

2.5 Marketplace UX

- **The cart authentication gate reworked around first-time buyers**, carrying the cart and the destination across the registration boundary rather than discarding them. `34a87fd`, `3ed5bf1`, `01ef50b`.
- **Real about and licensing pages** with a dual-audience structure. `78f2cb2`, `bdb7518`, `6629281`.
- **Mobile header rebuilt**: single hamburger, right-anchored, dark drawer. `3d73044`, `0dad10b`, `f194d8d`.
- **Anonymous dead ends replaced with calls to action** on the briefs and artist forms, instead of a redirect to a login screen. `3d0c3dc`, `61d174e`.

2.6 Communications

- **Transactional email to the artist** when a track is licensed and when a payout is issued. `eead3a7`.
- **A members-only artist contact channel** that logs a message before relaying it, placed on artist pages. `d69419f`, `dc704ed`.
- **A one-off artist re-engagement batch** with self-verification, so a silent failure to send raises an alert rather than passing unnoticed. `07346fd`, `79e18c2`.

2.7 Operations and integrity

- **Server rules that stop source leaking** from the webroot, tracked in the repository rather than living only on the server. `6dd568e` , `3f90de1` .
 - **A usage ledger** recording each dock play with the clearance verdict that applied at the time. `e2387a7` .
 - **An hourly audio Content-Type sweep.** `31f516c` .
 - **Production-only plugins brought under version control**, so a deployment can no longer delete something that exists only on the server. `4a06fa2` , `90f81e5` , `e2387a7` .
-

3 · Defects found and fixed

Ordered by consequence rather than by date.

DEFECT	WHAT WAS WRONG, AND WHAT IT COST
Artist account pages returned nothing (6b41637 , c167944)	A plugin update began refusing any database query that filtered on post status unless the requester was an administrator. The query returned null rather than zero and built no SQL, silently emptying every artist's music, licences and playlists pages, the playlist endpoint the OBS player calls, two public API endpoints and two shortcodes. It was invisible from an administrator account , which is why it survived so long. Found only because an artist reported it.
Both contact forms discarded every message (60e6a34)	Both posted to a WordPress admin endpoint that a security plugin redirects to the home page for anonymous visitors. The request never reached the application: no handler ran, no mail was sent, and the sender was returned to the front page as though it had worked. Every message a real visitor sent was lost, with no error at either end.
Audio served with the wrong content type (31f516c)	The upload service stored every file as generic binary. Chromium sniffs the bytes and plays anyway; Safari and iOS do not, and fail silently. Tracks were simply dead on those devices. The catalogue is now verified and swept hourly.
Cross-origin API requests were refused (3f90de1)	Preflight requests were never answered, so an external application on another domain could not call the API at all, while a command-line client could. This is the exact capability Milestone 4 exists to demonstrate.
Album playback was silent (a0b09c7)	A cross-origin attribute was set after the audio source was assigned, so the Web Audio graph emitted zeros. It played, with no sound and no error.
Licence verification never reported on-chain status (dca5503)	The public verification endpoint omitted the NFT fields entirely, so a minted licence looked unminted to anyone checking it.
Duplicate artist profiles (af37b54)	Create and edit were distinguished only by the presence of a parameter, with the ownership check inside the edit branch. Returning to the registration page silently created a second profile. Every artist who signed up in August hit it.

DEFECT	WHAT WAS WRONG, AND WHAT IT COST
The profile editing page had no form (af37b54)	It rendered an invitation to edit a profile with no inputs beneath it, which is what sent artists to the registration page and into the duplicate above.
Song cover art missing on new uploads (af37b54)	The album flow attached artwork to the album and never to the song, and the API read only the song thumbnail. Coverage went from 365 of 402 to 391 of 403 .
The player was built against the development API (b522ae9)	Build configuration precedence meant every deployed bundle pointed at a local address. The deployed dock had never been able to reach production.
Server-side analytics events were dropped (972afb9)	An ownership check discarded events raised by the server, so uploads and transcodes recorded nothing.
Payments from other sites were being acted on (4c36a6f)	Webhook handling did not scope to this property. Charges are now tagged and foreign events ignored.
The cart handoff silently did nothing (929d6a9)	A hook registered with the wrong argument count, so the cart was not carried across authentication and no error was raised.
Backup files were publicly readable (3f90de1 , 6dd568e)	The on-server editing workflow wrote backups inside the webroot, where they were served as plain text. No credentials were exposed. Files were moved rather than deleted, and the deny rules widened to match the naming actually in use.
The feedback banner reappeared every page (5b086ea)	Capped to once per session.

4 • Verifiable commit history

All hashes resolve in the repositories below. The platform repository is private; hashes are listed so a reviewer can be shown any commit on request. The player repository is public.

Platform, `Awen-online/sync-land` , **selected from 77 commits in the window:**

HASH	DATE	SUMMARY
8a97d5a	2026-07-07	Opportunities board and pitch system
eead3a7	2026-07-07	Licence and payout notification email
7c2c562	2026-07-10	Song rights metadata, terms audit, licensing controls
41f954e	2026-07-11	SLFS-v1 replaces CC-BY as the free tier
78f2cb2	2026-07-12	Dual-audience licensing page
4cac343	2026-07-13	Streamer API backing the OBS player
b659fb7	2026-07-13	Clearance documents on songs
ceb86f7	2026-07-13	OpenAPI specification v1.2.0
5698e18	2026-07-15	Streamer CORS and enriched clearance responses
d3721d5	2026-07-27	Artist-facing pitch view
8c6b78c	2026-07-27	Terms acceptance captured at registration
54f3b12	2026-08-02	Self-service artist profile deletion
a0b09c7	2026-08-07	Album playback silence fixed
dca5503	2026-08-07	Licence verification reports on-chain status
3ed5bf1	2026-08-08	Cart carried across registration
75389b0	2026-08-08	Public brief intake
972afb9	2026-08-08	Server-side analytics events restored
4c36a6f	2026-08-08	Payment scoping
0ec5888	2026-08-09	Honest receipt copy, ISRC at upload

HASH	DATE	SUMMARY
6dd568e	2026-08-09	Server rules against source leaking
6939b28	2026-08-10	Mint guard verifies rather than infers
42bd528	2026-08-11	Bios render, albums editable after upload
572a728	2026-08-12	Signup country capture
af37b54	2026-08-17	Artist location, duplicate guard, profile editing
3f90de1	2026-08-25	CORS preflights answered, source leak closed
5054912	2026-08-25	AI-use declaration at upload
31f516c	2026-08-25	Hourly audio content-type repair
e2387a7	2026-08-26	Usage ledger brought under version control
c167944	2026-08-31	Null total corrected on two account pages
6b41637	2026-08-31	Artist account pages restored for non-administrators

OBS player, `Awen-online/syncland-obs-player`, **public**, **Apache 2.0**:

HASH	DATE	SUMMARY
d8a9b1f	2026-07-13	Dock scaffold
5871308	2026-07-13	Live API by default
5337f18	2026-07-15	Cover art, durations, documentation, Apache 2.0
b522ae9	2026-08-17	v0.2.0: persistent player, audio routing, overlay, themes

5 • Production numbers

Read from production on 2026-08-31.

METRIC	AT SUBMISSION	ADDED SINCE M3
Registered accounts	55	10
Published artists	23	7
Artist territories represented	8	first measurable this cycle
Published albums	59	10
Published songs	403	31
Songs carrying cover art	391 of 403	from 365 of 402
Pitches on open briefs	37	37
Licences issued	8	1

Growth in the final weeks came from self-service signups rather than recruitment. Territory became measurable for the first time when artist location shipped, and the roster now spans eight countries.
