

Project Close-out Report

CATALYST PCR - FUND 11, PROJECT 1100272

Project Catalyst Fund 11

Milestone 5 - Finalization

Reporting period: 2024-02-29 to 2026-09-29

Issued: September 29, 2026

Prepared by Awen LLC · <https://sync.land> · Project #1100272

Project name	Sync.Land: Metaverse & Video Game Music Licensing (Awen)
Project number	1100272
Project URL	https://www.sync.land
Challenge	Fund 11, Cardano Use Cases: Concept
Project manager	Ian McCullough, Awen LLC, Milwaukee, Wisconsin
Project start date	11 March 2024
Project completion date	29 September 2026
Funding	100,000 ADA across five milestones; 85,000 ADA received for M1 to M4; this submission closes M5 (15,000 ADA)
Close-out video	[YouTube link: add after upload] (public, 4 min 52 s; also in the repository as <code>SyncLand_Closeout_Video_M5.mp4</code> with English captions)
Close-out report (full)	<code>SyncLand_Closeout_Report_M5.pdf</code> , in the same folder; section references below point to it

1. Deliverables

Proposed and delivered. A marketplace where independent artists license their own music for film, games, podcasts and streams, with each licence recorded on Cardano. All five milestones delivered: two licence tiers (Free Sync SLFS v1.2, which also covers live streams, and Commercial Sync SLCS v1.0), Stripe checkout in production, a licence PDF and public verifier, optional CIP-25 receipts through NMRK, a public REST API, a briefs board, and an open-source OBS player. Full inventory: report section 3.

On-chain evidence.

- Policy ID: `8da6b286a7ad6b44b92718d15a791cfb2ac6bcaaf23e1644bf5449a6` (Cardano preprod)
- Licence 12278 receipt:
<https://preprod.cardanoscan.io/transaction/044306663d6bcfa38eecff0650779e974e494bc2c0d3406c87a52c5e4d867a51>; verifier: <https://www.sync.land/wp-json/FML/v1/licenses/12278/verify>
- Grant disbursements, six transactions reconciled to 85,000 ADA: report section 8.1.

Off-chain evidence. Submission repository <https://github.com/Awen-online/sync.land> (all milestone packs, OpenAPI 3.0 spec v1.2.0, licence texts); OBS player <https://github.com/Awen-online/syncland-obs-player>; streamer setup <https://www.sync.land/stream/>.

Single URL hosting all outputs. <https://www.sync.land>

Open source. Yes: the OBS player (Apache 2.0) and the public submission repository.

Testing performed. Recorded test cases per milestone, an outside QA retest (June 2026), an integrity probe on every upload (669 files, none held), and the player's eligibility gate checked against all 660 published songs. Detail: report sections 3.1, 3.4 and 3.6.

User feedback. Gathered from the homepage survey, the contact inbox and artist email; each item changed the product, from a missing licence tier to the first streamer's setup. See report section 6.1.

Visual evidence. The close-out video; screenshots and recordings in the Evidence Index and the M3 and M4 packs.

2. Usage

Read from production on 29 September 2026 at 21:41 site time; every figure is dated in report section 5.

- **Artists and catalogue:** 150 registered users, 93 artist profiles from 26 countries, 660 published songs.
- **Briefs and pitches:** 289 briefs posted; 201 pitches from 31 artists, 164 in the last thirty days.
- **Licences:** 14 issued, 4 on-chain receipts minted and 4 pending; none yet bought by an outside buyer (section 5.3).
- **Growth:** 95 signups in September to the 29th, with no paid promotion; 48 first arrived from ChatGPT (section 5.6).

- **Streamers:** 3 accounts have connected a player in OBS; 16 artists have agreed to SLFS-v1.2 for live streams, covering 110 songs (sections 3.3 and 3.4).

3. Impact

Performance change. An independent artist now has a self-serve route to a sync licence with a PDF, a public verifier and an optional Cardano receipt; a buyer clears with one party, the artist.

Cost or time savings. Free Sync is free for small-scale creator use; Commercial licences start at 49 USD with 70 percent to the artist. Median time from registration to a published track was 39 minutes.

Cardano ecosystem benefit. A working consumer use of CIP-25 as a tamper-evident licence receipt, an open OBS player and API to build on, and a documented finding that no rights platform yet accepts such a token as clearance (section 2.1).

4. Sustainability

Ongoing. Sync.Land continues past the grant as an operating platform run by Awen LLC, funded by a 30 percent platform fee on each licence (70 percent to the artist). The next phase, the buyer side of the marketplace, is being financed through a pre-seed round. Further Project Catalyst funding may be sought later for open-source components, such as micro-sync settlement on Hydra. Roadmap: report section 7.

5. Key achievements, learnings and next steps

Achievements. Every milestone delivered with published evidence; artists arriving unprompted at a compounding rate; licensing with on-chain receipts in production.

Learnings. Silent failures cost the most; an on-chain receipt proves when, not rights; briefs recruit artists. See report section 6.

Next steps. Close the pitch loop, open the buyer side, grow streamers as a second funnel and build a claim desk (report section 7).

6. Links
