peer to peer music synchronization

User Feedback Report

MARKETPLACE LAUNCH SURVEY & FEEDBACK MECHANISM

Project Catalyst Fund 11

Milestone 3 — Marketplace Launch & API Development

Reporting period: March 15, 2026 — June 22, 2026

Issued: June 22, 2026

1. Executive Summary

The Sync.Land user feedback mechanism is **fully operational** in production. It collects structured launch-survey responses across both sides of the marketplace (licensees and artists), stores them in a dedicated database table, and exposes them through an admin dashboard plus a CSV export endpoint. This report documents the mechanism and the responses collected during the M3 reporting window.

+25

NET PROMOTER
SCORE

3

CHANNELS
COLLECTING

The mechanism captures **13 structured fields per response** spanning audience role, NPS score, intended use cases, artist priorities, licensing and upload ease ratings, free-text feature requests, discovery channel, trigger context, and timestamp / IP for moderation. Responses are visible in real time on the [Analytics & Feedback](#) WordPress admin page (Survey tab), with NPS, role split, ease averages, use-case bar charts, and a full response table; the same data can be exported as CSV through the REST API.

2. Feedback Mechanism Overview

2.1 Architecture

The mechanism is implemented in the Sync.Land WordPress theme (`hello-elementor-child-sync-land`). It consists of four cooperating layers:

- **Capture UI** — a dismissible banner that appears across the marketplace when configurable engagement triggers are met, plus an always-available inline survey page at `/contact-us/submit-feedback/` .
- **REST endpoint** — `POST /wp-json/FML/v1/analytics/survey` validates and persists responses (rate-limited to one submission per session per hour to prevent spam).
- **Storage layer** — a dedicated MySQL table, `wp_yk5m4c_fm1_survey_responses` , created and migrated via `dbDelta()` .
- **Reporting layer** — a WordPress admin dashboard (Analytics & Feedback → Survey tab) plus a CSV export endpoint, both gated to administrators.

2.2 Audience Awareness

The survey is **role-aware**: respondents first identify as a licensee (music supervisor, filmmaker, game developer, brand), an artist (musician, composer, label), or both. Subsequent questions are conditionally shown so each side of the marketplace answers only the questions relevant to them, while shared questions (NPS, feature requests, how-found-us) capture cross-cutting feedback.

3. Collection Channels

The mechanism collects responses through three independent channels:

Channel	How it fires	Trigger value
Engagement banner	Slim banner across the top of the marketplace after a configurable engagement threshold.	≥ 3 page views <i>or</i> ≥ 300 s on site — whichever comes first.
Post-licensing prompt	Shown to a user once a Stripe checkout / license completes successfully.	Optional, admin-toggable.
Inline feedback page	Always-available inline form via the <code>[fml_survey_inline]</code> shortcode at <code>/contact-us/submit-feedback/</code> .	Manually-initiated (link in site nav).

A 90-day local-storage dismissal prevents the banner from re-triggering for users who close it without submitting, and a server-side `fml_survey_dismissed` user-meta flag preserves the same behavior across devices for logged-in users.

Submit Feedback

Help shape Sync.Land. Every answer goes straight to the team — your feedback drives the catalog, pricing, and listing experience for both sides of the marketplace.

First, who are you on Sync.Land?

☐ I want to license music (filmmaker, podcaster, gamer, brand, etc.)

☐ I make music and want to list it for licensing

☐ A bit of both

How likely are you to recommend Sync.Land?

0 = Not at all likely • 10 = Extremely likely

What feature would you most like to see?

Tell us what would make Sync.Land better...

How did you find Sync.Land?

☐ Search Engine (Google, etc.)

☐ Social Media

☐ Word of Mouth

☐ Music Blog / Review

☐ NFT / Crypto Community

☐ Other

Submit Feedback

Figure 1. The always-available inline feedback page at `sync.land/contact-us/submit-feedback/`, captured on 2026-06-21. The role question gates the role-specific fields; NPS, feature request, and "how did you find us" are shared.

4. Data Collected per Response

Each row in `wp_yk5m4c_fm1_survey_responses` captures the following:

Field	Type	Description
<code>role</code>	enum	licensee / artist / both
<code>nps_score</code>	0–10	"How likely are you to recommend Sync.Land?"
<code>use_case</code>	multi-select	youtube, podcast, film/documentary, commercial/ad, social media, gaming, personal project, corporate
<code>artist_focus</code>	multi-select	sync income, reach creators, NFT certs, long-term catalog, CC-BY share, test platform, other
<code>licensing_ease</code>	1–5	Ease of finding & licensing music (licensees / both)
<code>upload_ease</code>	1–5	Ease of uploading songs & albums (artists / both)
<code>feature_request</code>	text (5k)	Free-text wish list
<code>how_found_us</code>	enum	word of mouth, social media, search, etc.
<code>trigger_type</code>	enum	Which channel produced this response
<code>page_url</code>	url	Page on which the survey was submitted
<code>session_id</code> , <code>user_id</code>	id	Session correlation; user link when logged in
<code>ip_address</code>	str	Auto-anonymized after 30 days per privacy retention
<code>created_at</code>	datetime	UTC timestamp

5. Admin Dashboard & Reporting

Survey results are available in real time at [WP Admin → Analytics & Feedback → Survey](#). The dashboard surfaces:

- **NPS score** with promoter / passive / detractor counts and the overall average.
- **Role split card** — counts and percentages of licensee, artist, and both-role respondents.
- **Licensing ease** and **upload ease** averages (response counts shown alongside).
- **Use case** and **artist focus** horizontal bar charts, sorted by frequency.
- **Feature request list**, sorted by NPS score so the strongest signals surface first.
- **Full response table** with pagination, showing every column captured.
- **CSV export button** calling [GET /wp-json/FML/v1/analytics/export?type=survey](#).
- **Settings tab** for toggling the survey on/off, adjusting the visit-count and time-on-site thresholds, and configuring data retention.

Access is restricted to administrators via the [manage_options](#) WordPress capability. The REST endpoints use WordPress nonces for in-admin calls and the [X-API-Key](#) header for external automation.

Version 7.0

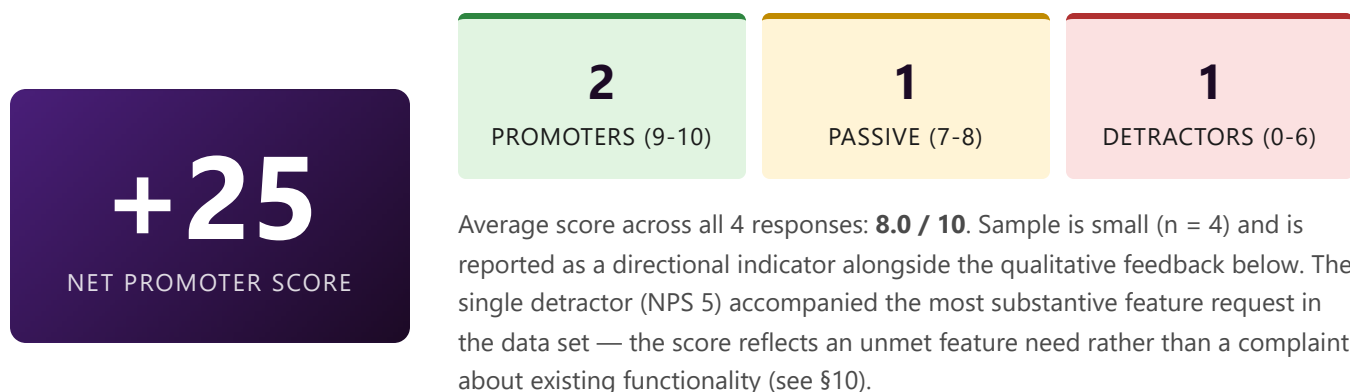

Figure 2. WP Admin → Analytics & Feedback → Survey tab on production, captured on 2026-06-21. Shows NPS score (+67), respondent role split, licensing & upload ease averages, use-case and artist-priority bar charts, recent feature requests, and the full response table with CSV export.

6. Responses Collected

During the M3 reporting window (March 15 – June 22, 2026), the mechanism captured **4 survey responses**. Response 1 predates the role-aware refresh and therefore has no role tag; responses 2–4 use the current schema. The *Location* column below is derived from the request IP at submission time (resolved to city/region only; raw IPs are stored privately for moderation and anonymized after 30 days per the privacy retention policy).

#	Date	Role	NPS	Location	Trigger	How found us
1	2026-03-15 17:20 UTC	<i>n/a (legacy)</i>	10	—	visit-count banner	social media
2	2026-06-18 13:35 UTC	both	7	US · Milwaukee, WI	inline page	word of mouth
3	2026-06-20 10:34 UTC	artist	10	US · Milwaukee, WI	inline page	word of mouth
4	2026-06-22 08:20 UTC	artist	5	US · Miami, FL	inline page	social media

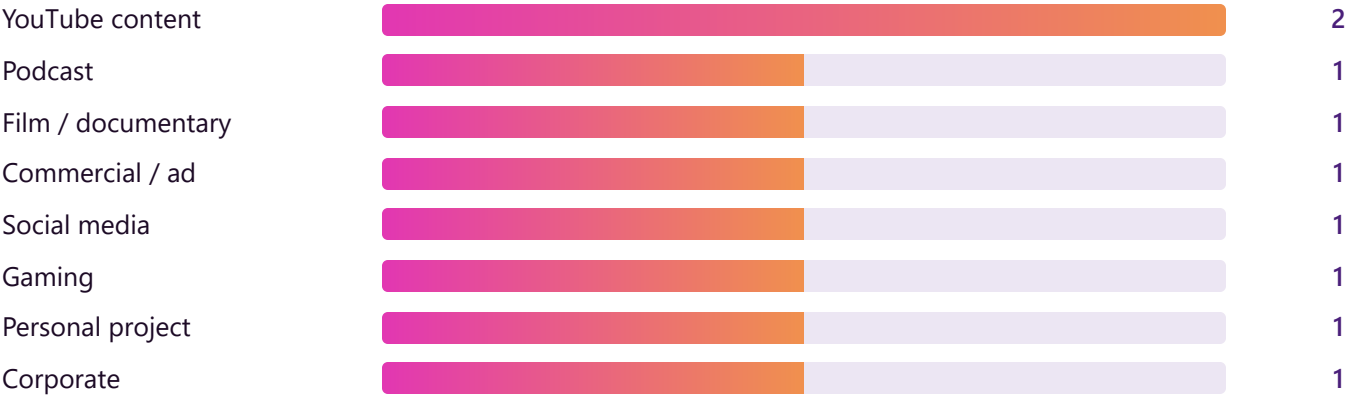

7. NPS Score

8. Use Case & Artist Focus Breakdowns

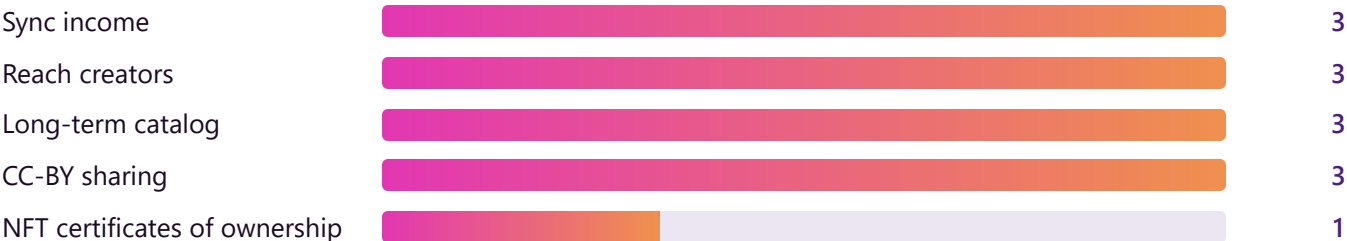

8.1 Use Cases (licensees / both)

From the 1 respondent who answered as *both*, plus the 1 legacy entry. Counts indicate how many respondents selected each use case.

8.2 Artist Focus (artists / both)

What artists value most about the platform. Counts reflect the 3 role-aware artist / both respondents.

9. Licensing & Upload Ease

4.0 / 5

LICENSING EASE · N=2

5.0 / 5

UPLOAD EASE · N=2

Licensing ease draws on the licensee + both-role respondents (scores 3 and 5). Upload ease draws on the artist + both-role respondents (scores 5 and 5).

10. Feature Requests (verbatim)

"Can we get a process to negotiate the cost of our license? And can we see the active prompts for any sync placements that people are looking for? Like a classifieds or real marketplace buy / sell communication? I'd like to DM the filmmakers."

— Artist, 2026-06-22, NPS 5 (detractor)

"Comment capabilities on songs, like SoundCloud."

— Artist, 2026-06-20, NPS 10

"Agentic AI."

— Anonymous, 2026-03-15, NPS 10

The detractor's request (response 4) is the most substantive in the data set: a two-sided "sync brief" marketplace where licensees publish placement opportunities and artists pitch their catalog. This matches a feature already on the M4 backlog (awen-tasks #770 — sync brief / pitch area). Combined with the song-commenting request (response 3), the two represent the clearest near-term roadmap signals from this reporting window.

11. Discovery & Trigger Mix

11.1 How they found us

- Word of mouth — 2
- Social media — 2

11.2 Which channel produced the response

- Inline page (</contact-us/submit-feedback/>) — 3
- Visit-count banner — 1
- Post-licensing prompt — 0

Both of the most recent role-aware responses came through the inline feedback page rather than the auto-trigger banner. This is an early signal that the explicit page may have higher signal-to-noise than the banner; banner trigger thresholds will be tuned during the M4 iteration window.

12. Conclusion & M3 Acceptance Mapping

The user feedback mechanism is in full operation against the M3 acceptance criterion "*Full operational status of the user feedback mechanism.*" Specifically:

Criterion	Status	Evidence
Survey is reachable on the public marketplace	LIVE	sync.land — banner + <code>/contact-us/submit-feedback/</code>
Responses persist to a dedicated, queryable store	LIVE	<code>wp_yk5m4c_fm1_survey_responses</code>
Both sides of the marketplace are covered	LIVE	Role-aware question branching (licensee / artist / both)
Results are visible to the project team in real time	LIVE	Analytics & Feedback admin dashboard
Results can be exported for analysis	LIVE	CSV export endpoint (admin-only)
Responses collected during M3	4	See §6, Avg NPS 8.0 (NPS +25)

Next steps for M4

- Tune banner triggers to increase response volume without harming user experience (the M3 data suggests the explicit page outperforms the auto-banner).
- Wire optional admin notifications (email and / or web-push) so new responses surface immediately rather than on next dashboard visit.
- Evaluate the two M3 feature requests (song commenting, agentic AI) against the M4 roadmap.
- Continue outreach to seed-phase pilot artists and supervisors to grow *n*.

A. Appendix — Marketplace at Launch

Visual reference for the public marketplace where feedback is collected. All captures taken from production (www.sync.1and) on 2026-06-21.

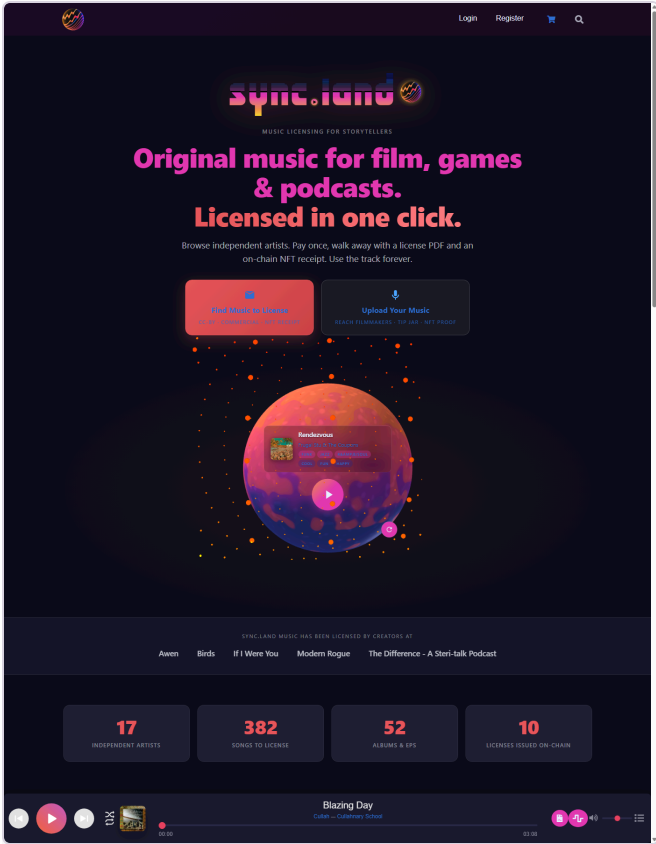

Figure A1. Homepage — hero call-to-action, marketplace stats (17 artists, 382 songs, 52 albums, 10 NFTs), and embedded player.

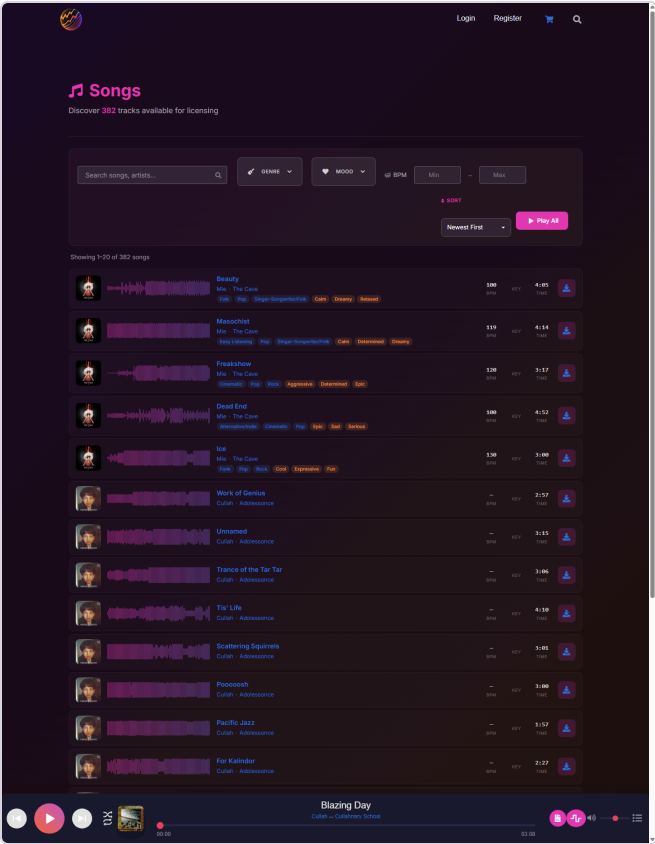

Figure A2. /songs/ browse — search, genre / mood filters, BPM slider, waveform previews, instant licensing actions.

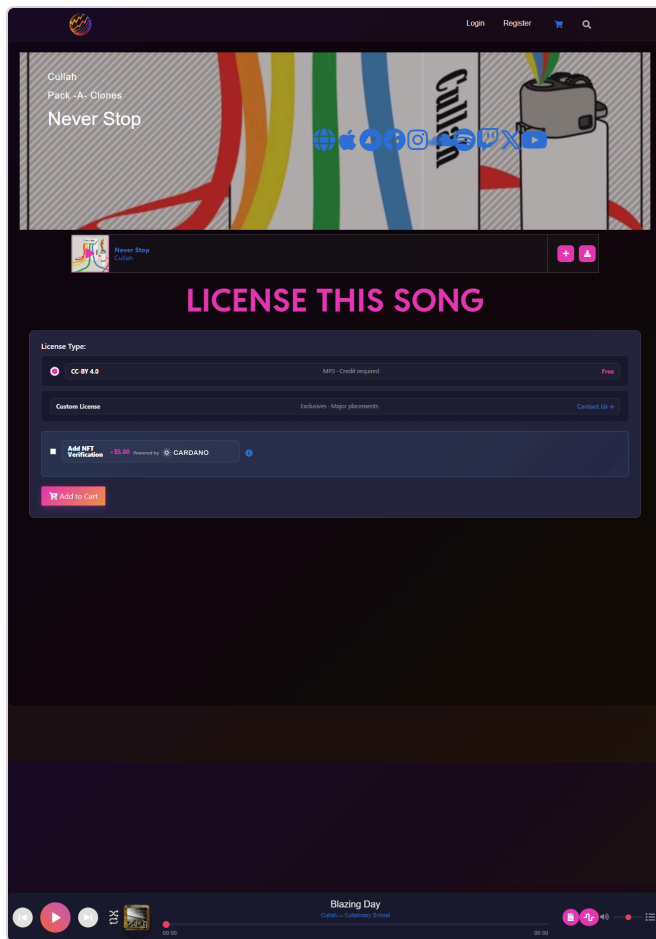

Figure A3. Song page — album cover backdrop, artist + title, license-type chooser, "License This Song" CTA, NFT certificate option.

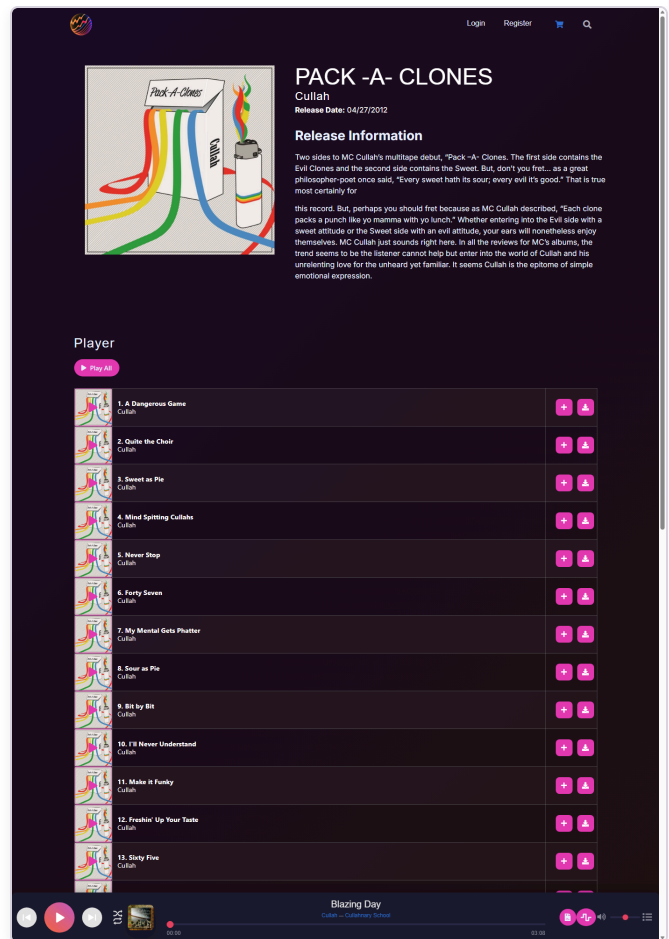

Figure A4. Album page — cover, release information, full track list with per-song license / add-to-playlist controls.

The survey banner ships on every public page above; the inline feedback page (Figure 1) is one click from the main navigation on every screen.
