

SYNC.LAND
peer to peer music synchronization

Marketplace & On-Chain Evidence

VISUAL TOUR & CIP-25 PROVENANCE

Project Catalyst Fund 11

Milestone 3 — Marketplace Launch & API Development

Issued: June 23, 2026

1. Marketplace at Launch

Visual reference for the public marketplace running at <https://sync.land>. These four captures cover the surfaces a public buyer reaches when discovering, previewing, and licensing music — the same surfaces referenced by the test case video and the User Feedback Report. All captures taken from production on 2026-06-21.

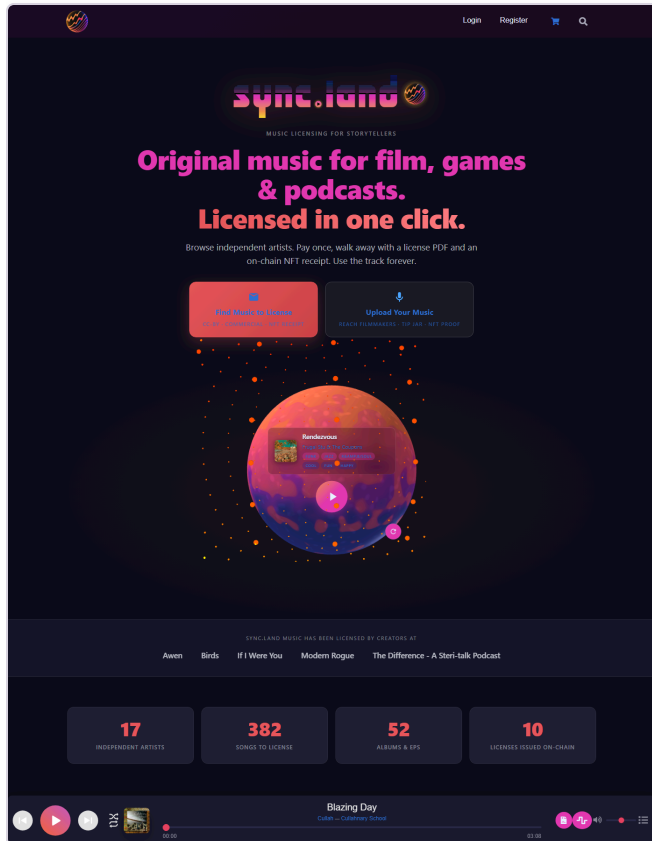

Figure 1.1. Homepage — hero call-to-action, marketplace stats (17 artists, 382 songs, 52 albums, 10 NFTs), and embedded player.

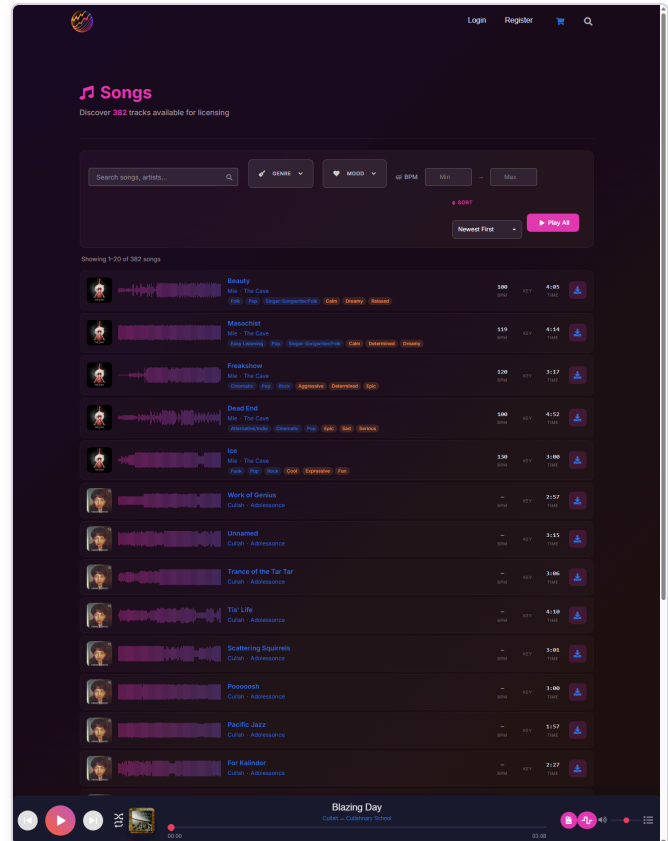

Figure 1.2. /songs/ browse — search, genre / mood filters, BPM slider, waveform previews, instant licensing actions.

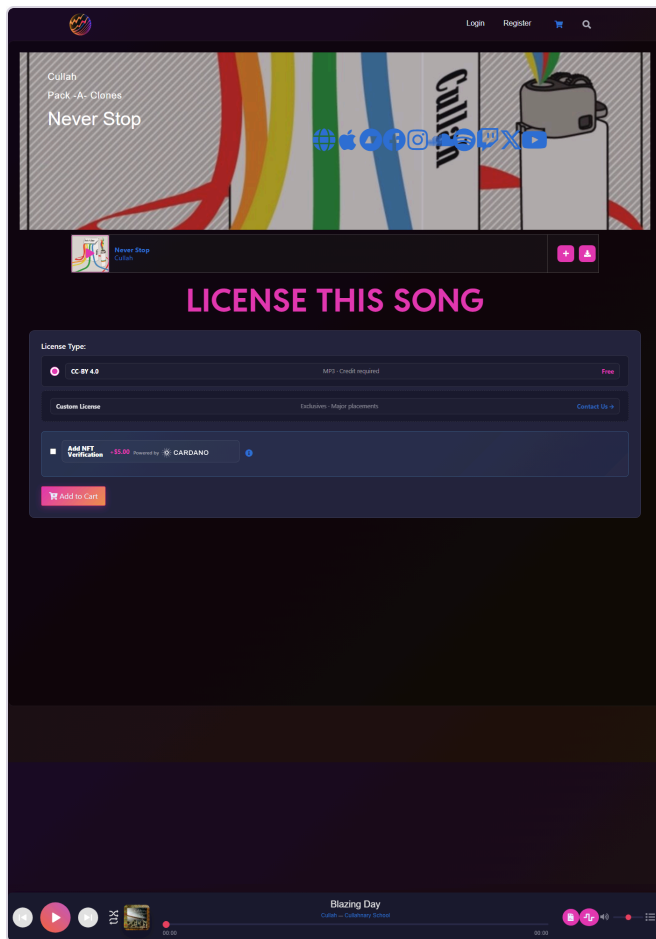

Figure 1.3. Song page — album cover backdrop, artist + title, license-type chooser, "License This Song" CTA, NFT certificate option.

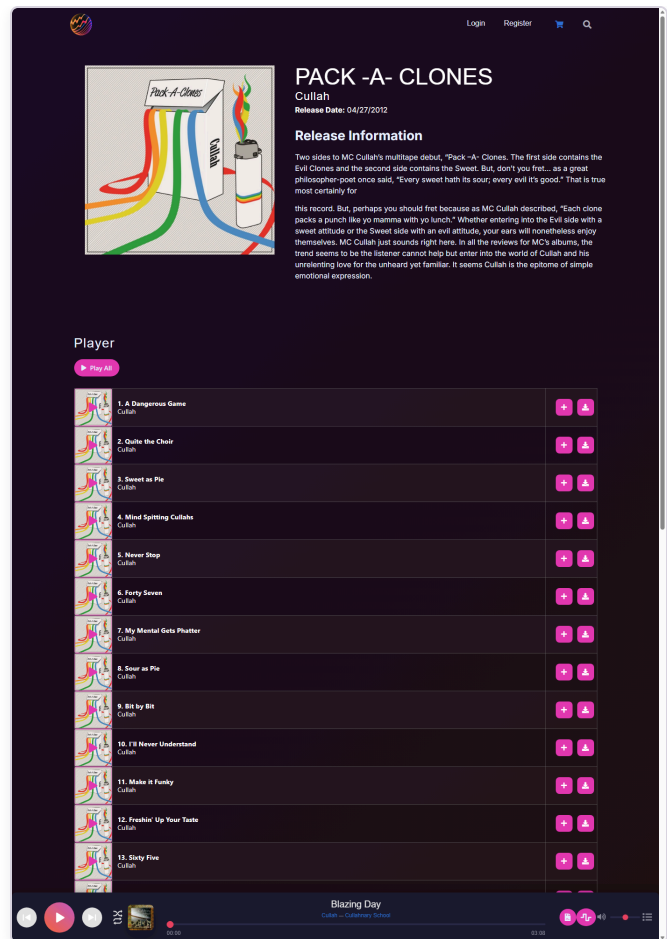

Figure 1.4. Album page — cover, release information, full track list with per-song license / add-to-playlist controls.

The user feedback banner ships on every public page above; the inline feedback page is one click from the main navigation on every screen. See the User Feedback Report for the full feedback infrastructure documentation.

2. On-Chain Provenance — M3 Test Case

This section supplements the [Test_Case_-_NFT_License_Purchase.mp4](#) recording with the canonical on-chain proof of the demonstrated mint. Reviewers can verify the NFT and its CIP-25 metadata independently of the video by following the Cardanoscan link below.

Field	Value
Network	Cardano preprod
Mint date (UTC)	2026-06-23
Song / Artist	"Ice" by Mie
License type	CC-BY 4.0
Licensee	Ian McCullough / Awen
Project tag	Project Catalyst Fund 11 — Milestone 3
Policy ID	8da6b286a7ad6b44b92718d15a791cfb2ac6bcaaf23e1644bf5449a6
Asset name	SL11798_th3107
Cardanoscan	https://preprod.cardanoscan.io/token/8da6b286a7ad6b44b92718d15a791cfb2ac6bcaaf23e1644bf5449a673796e636c616e6470726570726f64534c31313739385f7468336c3037
License PDF (on-chain link)	https://fml-licenses.s3.us-east-005.dream.io/NonExclusive_Mie_Ice_2026_0623_183533.pdf

2.1 CIP-25 Metadata (verbatim from chain)

```

The CIP-25 standard is the on-chain spec for native asset metadata on Cardano. Long string fields are chunked to fit within the 64-byte on-chain limit per item (e.g. the image and license URLs above appear as two-element arrays in the JSON, which clients concatenate when rendering). Fields beyond the CIP-25 core (License Type, Licensor, Licensee,

Territory, Term, Project, etc.) are Sync.Land's licensing schema layered on top so each NFT is self-describing as a sync license, not just a token.

3. Platform Code — Open-Core Release

Alongside the M3 documentation, Sync.Land publishes a curated open-source subset of the platform code under the **MIT License** — matching the licensing commitment made in the Catalyst Fund 11 proposal. The marketplace-specific logic (Stripe checkout, NMKR minting, cart, admin tooling) remains proprietary and lives behind the hosted site at <https://sync.land>. Approximately **2,860 lines of PHP across 9 modules** are released, representing the SEO, feedback, and public-read REST surfaces that are useful to other developers without exposing the marketplace moats.

3.1 Repository Map

All paths are relative to the repo root at github.com/Awen-online/sync.land.

Path	Contents
<code>LICENSE</code> / <code>code/LICENSE</code>	MIT License, copyright Awen LLC.
<code>code/README.md</code>	Top-level "Selected Open Components" framing — what's in scope, what's intentionally not.
<code>code/docs/api-spec.yaml</code>	OpenAPI 3.0 specification for the full REST surface (also rendered as <code>SyncLand_API_Documentation_M3.pdf</code>).
<code>code/docs/api-authentication.md</code>	API-key + WordPress-nonce authentication guide.
<code>code/docs/pods-schema-nft-fields.md</code>	Pods CPT field reference for song / artist / album / license.
<code>code/docs/stripe-setup.md</code>	Stripe + NMKR integration walkthrough.
<code>code/wp-content/themes/syncland-open-core/</code>	The open-core child theme. Installable as a Hello Elementor child.

3.2 Open Modules

Module	What it demonstrates
SEO — structured data <code>functions/seo/music-schema.php</code> (348 LOC)	Schema.org JSON-LD graphs for music: <code>MusicRecording</code> , <code>MusicAlbum</code> , <code>MusicGroup</code> , <code>AudioObject</code> , license URL. Hooks <code>the_seo_framework_schema_graph_data</code> .
SEO — dynamic per-CPT meta <code>functions/seo/dynamic-meta.php</code> (261 LOC)	Auto-generated title / description / <code>og:image</code> for song, album, and artist CPTs by resolving Pods relationships (song → album → artist). Hooks The SEO Framework generation filters; honors per-post manual overrides.

Module	What it demonstrates
Analytics — schema <code>functions/analytics/schema.php</code> (82 LOC)	<code>dbDelta()</code> creation of the analytics events table and the role-aware survey responses table.
Analytics — survey UI <code>functions/analytics/survey.php</code> (323 LOC)	Role-aware feedback survey: dismissable banner with configurable triggers + an inline <code>[fml_survey_inline]</code> shortcode page. Question flow branches on licensee / artist / both.
REST — survey + events <code>functions/api/analytics.php</code> (293 LOC)	Public <code>POST /FML/v1/analytics/survey</code> with per-session rate limiting, plus admin <code>GET</code> endpoints for survey results and CSV export.
REST — auth + rate limit <code>functions/api/security.php</code> (621 LOC)	API key authentication, per-IP rate limiting, response envelopes (<code>fml_api_success</code> / <code>fml_api_error</code>).
REST — public reads <code>functions/api/songs.php</code> , <code>artists.php</code> , <code>search.php</code>	Public-read song / artist / search endpoints — the building blocks for any external app browsing the catalog.

3.3 M3 Changelog (Highlights)

Notable changes shipped during the M3 development window (March – June 2026):

- **Cart system shipped:** guest-aware shopping cart, Stripe Checkout, license PDF generation, NFT add-on flow with Cardano-address validation, and a per-user "license history" page.
- **Role-aware user feedback infrastructure:** novel survey design that branches questions by licensee / artist / both, surfaced as a banner and a dedicated inline page. Includes admin dashboard with NPS, role split, charts, and CSV export.
- **Analytics events + dashboard:** per-session event capture (song plays, form submissions, license purchases, NFT lifecycle events), surfaced in the admin Analytics & Feedback page with funnel and per-event drilldowns.
- **Dynamic per-CPT SEO:** every song, album, and artist page now renders license-intent titles and descriptions derived from Pods relationships, and surfaces structured data so catalog tracks can be indexed as music records by search engines.
- **NFT minting hardening:** NMKR integration with CIP-25 metadata builder, IPFS license-PDF pinning via Pinata, status polling and admin NFT Monitor, and triple-layer duplicate-mint guards (status check + on-chain footprint check + processing-window cooldown).
- **API spec consolidation:** OpenAPI 3.0 specification published, rate-limit + API key middleware added to every external endpoint.
- **Homepage v2:** redesigned conversion-tuned homepage with scoped particle effects, embedded player, and featured-artists planet.

Full per-commit history is browsable on GitHub at github.com/Awen-online/sync.land/commits/main. The dev-branch repo — tracking ongoing marketplace work between milestone snapshots — lives at github.com/Awen-online/sync-land.
